

Lift & Move - More than just transportation

At Ravenstock MSG we pride ourselves on possessing the highest Health and Safety accolades within our industry. So when it comes to transportation and installation we leave nothing to chance.

Even before the transit of your units takes place, the delivery process is being carefully planned. All our site installations are implemented in accordance with all current Health & Safety legislation and the relevant British Standards.

For our complex installations we have dedicated CPCS Appointed Persons who will undertake a site visit and then prepare a suitable Method Statement and risk assessment, together with a lifting plan of the installation. This ensures that the safety of the operation is assured at all times. The dedicated appointed person will supervise the lifting operation on site to ensure the necessary statutory requirements and Ravenstock MSG standards are met at all times.

Our fleet of crane arm delivery lorries will deliver your units directly to site.

The lifting operation will be undertaken by CPCS accredited drivers, who are equipped with all suitable personal protective equipment and are fully conversant with all current safety legislation.

All Ravenstock MSG's lorry loader cranes conform, and are certified to, current specific Health & Safety legislation namely LOLER (Lifting Operations Lifting Equipment Regulations) and PUWER (Provision and Use of Work Equipment Regulations).

Ravenstock MSG's installation teams are CSCS accredited Modular/Portable Building Installers/Dismantlers. This ensures that the high standards continue until the task is complete and customer satisfaction is reached.

In addition to this we are also a member of the Road Haulage Association and are accredited by the association for lorry loaders, ALLMI.
